Notes:

- [1] Windows Server 2003 Terminal Services are only supported when all C5 sessions are run through Terminal Services. Only Intel x86 platform is supported.
- [2] In order to use all the functionality in C5 the following extras are required: Microsoft Office and Internet Access.
- [3] Only released for the Icelandic market. Not able to update from previous Danish versions.
- [4] Windows Server 2003 Terminal Services and Windows Server 2008 Terminal Services are only supported when all C5 sessions are run through Terminal Services.
- [5] [Microsoft Office 64-bit: Automation integration with Microsoft Word 64-bit and Microsoft Excel 64-bit will not work, but mail \(MAPI\) integration with Microsoft Outlook 64-bit will not work. See http://msdn.microsoft.com/en-us/library/dd941355/office.14_a](http://msdn.microsoft.com/en-us/library/dd941355/office.14_a)
- [6] Word Starter and Excel Starter are not supported.
- [7] Microsoft Dynamics C5 2012 has been tested on both Microsoft Office 2007 and Microsoft Office 2010, but as Microsoft Dynamics C5 2012 must be supported for 5 years, the supported Microsoft Office version will be Microsoft Office 2010. List of supported operating systems remains unchanged.
- [8] Microsoft Dynamics C5 32-bit Native ODBC driver only works with 32-bit programs, hence the Microsoft Dynamics C5 32-bit Native ODBC driver will not work with e.g. Microsoft Excel 64-bit.
- [9] Maximal physical size of Native database files are 4 Gb on supported x86 and x64 platforms.
However, due to the new database size calculation introduced in Microsoft Dynamics C5 2012, a close-to 4 Gb physical size Native database might be reported as 3,3 Gb licensed size or less.
This might lead to a situation where the physical size of the native database file might reach 4 Gb and hence cannot grow any further, without any warnings.
A warning system for this situation has not been implemented in currently released kernels for Microsoft Dynamics C5 2012.
Administrators of Microsoft Dynamics C5 2012 installations with Native database files larger than 3 Gb should monitor the physical size of the database files on a regular basis in order to prevent a unwanted production stop.
In general when Native database files grows beyond 1 Gb (licensed size or physical size), coversion to SQL database should be considered.
Please see section "Hornár skal man skilte?" in the document "Best Practices Dokument til Microsoft Dynamics C5" on PartnerSource (see link below)
[Best Practices Dokument til Microsoft Dynamics C5](#)
- [10] Due to the new database license model introduced in Microsoft Dynamics C5 2012, a Native database file might reach the physical limit of 4094 Mb in file size, before the licensed database size reach 4094 Mb.
A single-file Native database might reach the physical limit of 4094 Mb when the licensed database size reach somewhere between 3072 Mb and 3584 Mb depending on data content and free space in the database.
Beginning Microsoft Dynamics C5 2012 HF3 a new warning system has been implemented in the C5 kernel and C5 application, that warns when physical size of a Native database exceeds 90% of the maximum 4094 Mb possible.
- [11] Microsoft SQL Server 2005 is not supported on Windows 8 and Windows Server 2012 and later. Please see <http://support.microsoft.com/kb/2681562> for more information.
- [12] Preliminary tests have been conducted on Microsoft SQL Server 2014 CPT2, and no problems have been observed so far.
